

CPV by the Numbers

POWER GENERATION

CPV: TWO DECADES OF ENERGETIC GROWTH

DEVELOPMENT

CPV'S EVOLUTION TODAY

More than **13.5 GW*** of CPV developed, sold, financed and acquired power generation facilities since 1999

\$5.9 billion in major energy facilities developed & financed in 8 years

MANAGEMENT

36 major power facilities managed, with

9.3 GW currently under management

and a total of

20 GW* managed since inception

*The energy equivalent of 9,430 utility-scale wind turbines, 26.7 million horses or 26,700 thousand top end Z06S Corvettes.
Source: Energy.gov

PAST TEN YEARS (2010 - 2020)

8 power facilities developed and financed

5.2 GW

of natural gas and wind generation facilities brought online since 2010

enough power to supply

5 million homes

*One Gigawatt (GW) is the amount of electricity necessary to power 1 million homes. There are 1,000 megawatts (MW) in one GW.

ENVIRONMENTAL TECHNOLOGY

63% Efficiency rating of CPV's latest facility design—that's 33-50% more efficient than 20th Century technology

Billions of Gallons of freshwater saved by utilizing industrial and municipal wastewater for cooling

5 wind projects totaling **762 MW**

2X Win Community benefit of designing and building facilities on brownfield sites

5 number of generation fuel types managed by CPV/AMG

SAFETY DRIVEN

32% Better than industry average on Recordable Incident Rates

4% Better than industry average on Lost Time Accidents
